

# S-PATCH EX<sup>®</sup>

Small, Simple, Smart ECG Patch

## Medical grade heart monitoring and analysis solution

Lightweight and convenient patch-type wearable device

Provide a comprehensive monitoring and analysis solution

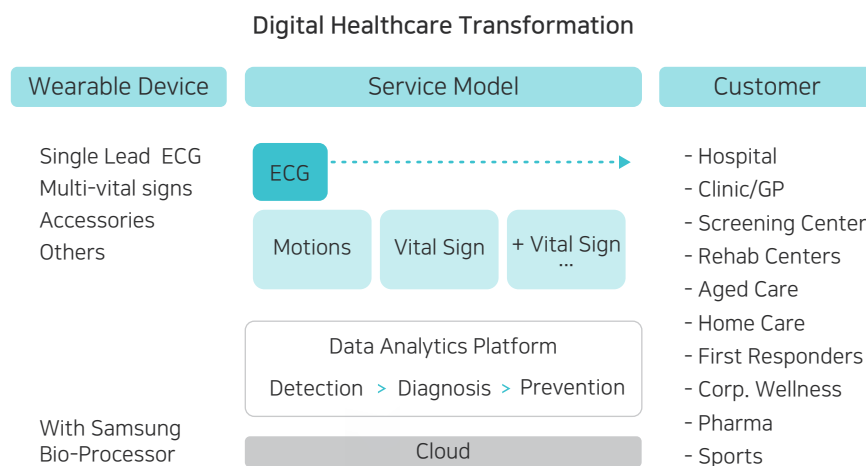

## Vision

Leader in Transforming Healthcare from CURE to CARE

## Mission

ECG-based Multi-vital-signs Analysis Solution Provider

## Recent achievements

- S-Patch Ex launched in over 14 countries
- Deployed to over 600 Hospitals and Clinics around the globe
- S-Patch Ex CE, MFDS, GMP Approved
- Awarded as 'Best of Bio Korea 2021' (Hosted by Bio Korea 2021)
- CE (+ISO 13485) for Europe, TGA, HSA, and FDA 510K in progress
- Awarded 2019 HIMSS ASIAPAC INNOVATION AWARD FOR ARTIFICIAL INTELLIGENCE
- Global Partners
  - Research
  - Distributor
  - Reseller
  - Integration

# S-PATCH<sup>®</sup> EX

Small, Simple, Smart ECG Patch

Innovation with patient centered design & engineering

## Light weight & Small

- 9g – lightest on the market
- Smallest contact to skin
- Less noise detected (Fit for use during active movement or physical activities)

## Flexible design

- Cable design enable vertical location for Lead II signal view
- Clear P-Wave
- Line connection minimize noise

## Simple

- Easy to attach by patient (self patching)
- User friendly app connected using BLE
- Operate multiple functions with single button (Power on/off, Log symptom, Reset device)

## Latest Technology

- BLE 5.1
- Onboard Memory (no data lost)
- Waterproof (IP55)
- Motion sensor
- Samsung Next Gen Bio-Chip BP6

## Reusable

- 100% compatible with existing Electrodes on the market
- Disposable coin battery (saves unnecessary recharging time)
- Durable (reuse over 100 times)

Optional S-Patch lineup for varied test environments

## S-PATCH EX Long Lead<sup>1</sup>

- Used for patients requesting stretched patch based on body types
- 2 times longer cable length
- Prescribed after physician consulting

## S-PATCH EXL<sup>2</sup>

- Performs prolonged ECG tests over 72 hours
- Battery life lasts up to 9 days
- Prescribed after physician consulting

# Solution

## Wear your S-Patch

### Ultralight wearable patch

Most comfortable to wear and clear signal data captured with minimum noise

## Connect to App

### Synchronize ECG data to mobile device

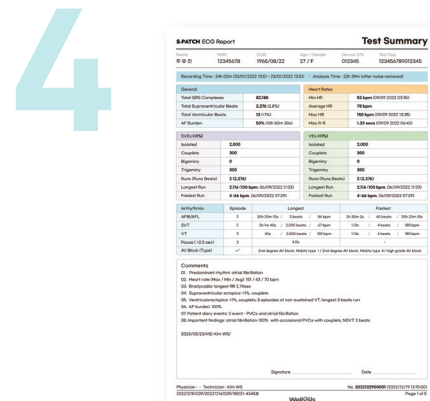

Providing real-time ECG and personalization enabled data management

## Analysis Data

### Cloud-based web portal

Secured access to data in any locations for clinicians to view, edit and diagnose patients' ECG

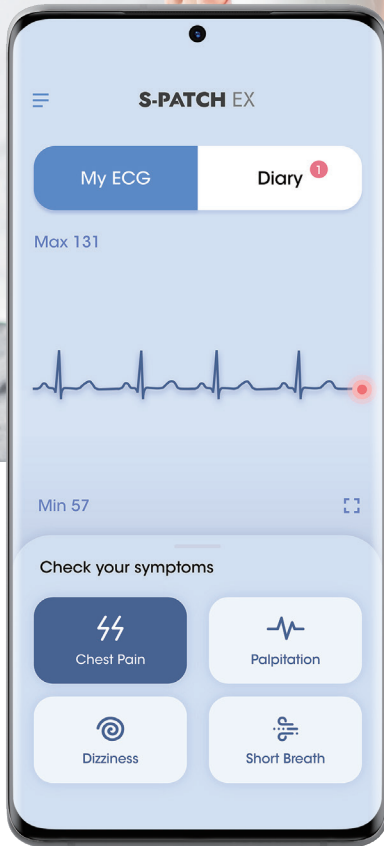

## Report Analysis

### ECG analysis for clinicians

Easy-to-read report including clinical information identical to original Holter test, improved by type and time of cardiac symptom occurred to patients

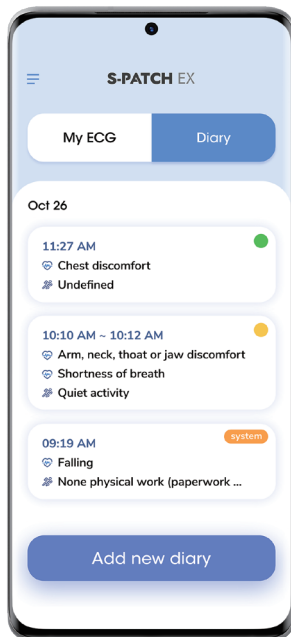

### Step1.

#### Start ECG recording / Log your symptoms

Monitor your real-time ECG graph, HR, HRV level on the app

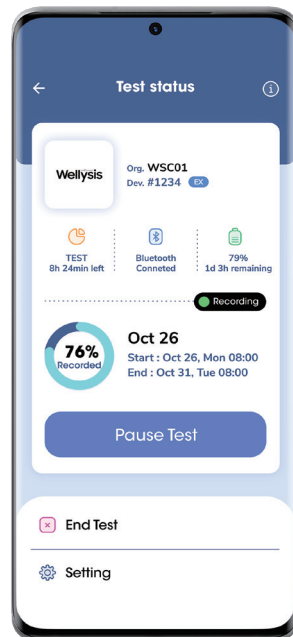

Tap on one of the four major symptoms to quickly log your symptom

### Step2.

#### Enter Patient Diary

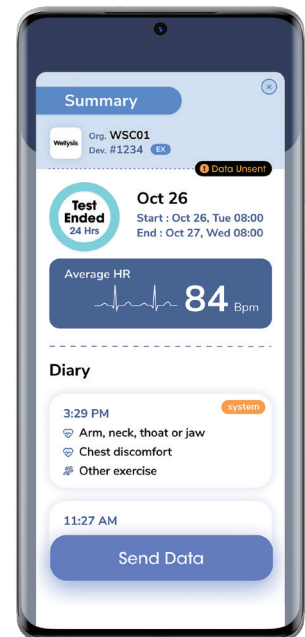

Add and track your symptom and activity records on the diary

### Step3.

#### Check Your Device Status

Find out your current test status, bluetooth connection, and battery level

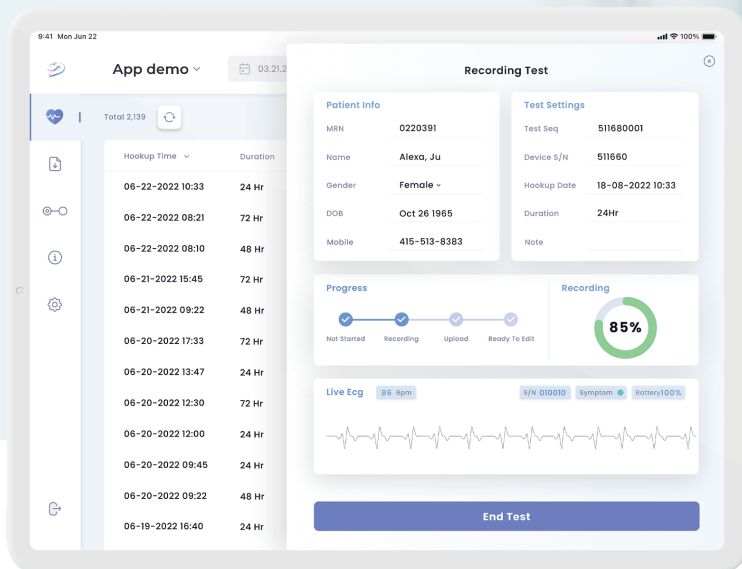

### Step4.

#### Send Data

Send to S-Patch Ex Web for analysis of your ECG data

## S-PATCH APP FOR PHYSICIANS

### MULTIPLE TEST CONTROLS WITH A SINGLE TABLET

#### Inpatient Monitoring

Track & Control all in-bed patients with one tablet

#### Rehab Center

One rehab doctor/coach managing multiple patients in one session with one tablet

#### Nursing Home

Smartphone-free tests for elderly patients

**Intuitive  
Dashboard View**

**Consistent  
Test Management**

**Simultaneous  
Test & Upload control**

#### Patient: Burdenless smartphone-free tests

- Able to test with S-Patch only during the prescribed test period
- Record symptom with the device power button

#### Physicians: Efficient test controls

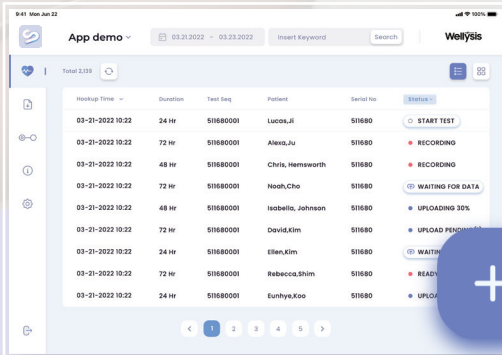

- Access to entire test procedure with a single tablet: Create, Start, Edit, Delete, End, and Upload test  
\*After data upload, proceed with the next step on the Web Portal
- Able to manage multiple test status and data uploads

### Upload Scheduling

Upload multiple test data by scheduling uploads

# Use Cases

## Ambulatory care

### Quick & Easy Diagnosis

1. Patients with heart related symptoms such as palpitation, shortness of breath, syncope, etc., visits hospital or primary care doctor
2. Doctor prescribe ECG test (including duration)
3. Nurse help patients to wear S-Patch Ex and begin the test
4. Patients return to home and wear during prescribed days
5. S-Patch App will automatically end the test and upload the test based on prescribed duration
6. Once the test is available on the cloud with analysis completed
7. Doctor checks the test from the cloud and finalize the diagnosis and generate clinical report

 **Hospital Universitario**  
**12 de Octubre**

## Health Checkup

### Detect & Prevent

1. Visit Health Checkup center
2. After full checkup wear S-Patch & go home
3. 2 days later app automatically uploads test and test is analyzed
4. Return the device back to the center via mail
5. Receive clinical report signed by Cardiologist

 **SAMSUNG MEDICAL CENTER**

*Please refer to cardiologist if an arrhythmia is suspected*

## Sports

### Know your potential

1. Before exercise wear S-Patch
2. Continuously monitor ECG during exercise
3. Check real-time ECG using phone or watch
4. Mark type of exercise using Patient diary
5. After completion of exercise, upload data to the cloud
6. Once the analysis is completed check for abnormality during each session

## Telemedicine

### My Cardiologist online

1. During Teleconsultation doctor prescribes ECG test to the patients
2. S-Patch is delivered to patients' home with instructions to wear S-Patch
3. After test is completed (prescribed days), S-Patch app automatically uploads to the test to the cloud where the test is analyzed and annotated by the system
4. Return the device back to the center via mail (or purchase device for more test)
5. Follow-up teleconsultation is scheduled, and test results is shared with patient by the doctor

*Please refer to cardiologist if an arrhythmia is suspected*

# Wear it. Be healthy.

Wellysis is a digital healthcare solution company,  
a spin-off from Samsung SDS

S-Patch powered by Samsung Bio-Processor was awarded  
HIMSS ASIAPAC INNOVATION AWARD FOR ARTIFICIAL INTELLIGENCE
